

## 1 Dummy Text

I doubt that there is any useful information here [1].

All we know is limited, apart from knowing the answer we all know. Or do we? Wombat and Koala have discovered some interesting things [3].

Some people are too nosy. What can happen to them is described by Laura Lion [2, p. 9].

```
1  n = 100
2  for i in range(1,n+1):
3      result = ""
4      if i % 3 == 0:
5          result += "Fizz"
6      if i % 5 == 0:
7          result += "Buzz"
8      if result == "":
9          result = str(i)
10
11  # Test latex in comments
12  #  $\text{\LaTeX}$ 
13
14  # Test math mode in comments
15  #  $\int x^2 \, dx$ 
```
